Maloney Nerve Institute Uses Latest Techniques to Offer Relief From Diabetic Neuropathy

TUCSON, AZ (March 3, 2011) – The doctors of the Maloney Nerve Institute have many years of experience and expertise in the field of peripheral nerve surgery and the treatment of diabetic neuropathy. The team of highly skilled surgeons utilizes some of the most advanced procedures and techniques available today. As new technologies emerge, you can be sure that the doctors at the Maloney Nerve Institute will make them available to their patients.

“As new treatment options become available, we study and refine these techniques to be able to best use them to help our diabetic patients,” said Dr. Christopher Maloney, continuing, “This research allows us to offer many more surgical and non-surgical options that were not available to patients as recently as five years ago.”

Some of the latest procedures include nerve decompression, which helps relieve pressure on nerves caused by swelling of the nerves and surrounding tissues. Nerve decompression surgery is an outpatient procedure that takes about an hour. This has shown to be a viable alternative for some diabetics who suffer from diabetic neuropathy, and is also commonly used to treat carpal tunnel syndrome, Morton’s Neuroma, and other nerve-related pain.

To find out more about the Maloney Nerve Institute’s research, visit MaloneyNerveInstitute.com and view the Patient Tutorial: "Where does it Hurt?" to review common symptoms and procedures associated with the root of many types of nerve-related pain. Also, downloadable tutorial brochures can help patients easily identify causes, symptoms and treatment options available.

About the Maloney Nerve Institute

Christopher Maloney, MD, a board certified plastic surgeon who specializes in peripheral nerve surgery, along with A. Lee Dellon, MD, started The Institute For Plastic Surgery and Peripheral Nerve Surgery in 2004 in Tucson, Arizona. Together they were responsible for the training and mentoring of numerous doctors and students practicing medicine throughout the United States. Dr. Maloney has lectured internationally on nerve related topics as well as participated in humanitarian efforts in Ecuador for patients suffering from nerve pain. Dr. Maloney uses his extensive experience, education and training to ensure the best care and highest success rate for his patients’ surgical outcomes. Dr. Maloney is a Clinical Associate Professor of Plastic Surgery and Neurosurgery at the University of Arizona and a member of the American Society of Peripheral Nerve Surgeons.
